

## Boat Launching Wheels To Make Your Job Fast And Easy

Every once in awhile someone comes up with an idea so simple but so good you're tempted to smack yourself in the forehead in an, "I should have had a V-8" moment. And you wonder why in the world you didn't think of it yourself. Or, maybe you DID think of it yourself but never acted on the idea to bring it about. This must be how many feel when first exposed to the concept of [boat launching wheels](#).

These wheels are so useful and yet so simple. After you've had them installed and used them one time you'll wonder how you ever managed without them. And for sure, you'll never want to own another small boat without having a set installed. But then, they may well outlast the boat on which they're installed and can easily be taken off and reinstalled on your next vessel.

If you own a boat that you use for hunting or fishing these wheels are a must-have. They can take a load up to 400 pounds, making it possible for you to launch your boat with the motor already attached and full of all your gear with no sweat, literally. And you can do it all by yourself, too.

These launching wheels will save wear and tear on your boat. They'll save wear and tear on you too, making it a snap to move the boat over all kinds of terrain with ease. They make it unnecessary to have a couple of able bodies along every time you need to move your craft.

The outfit that came up with and took the patent on the launching wheels recently won a vote done by Boating Magazine for best landing gear package. Price, quality convenience and size were all considered. With their innovative design you can launch your boat just about anywhere, by yourself. This is a great benefit to seniors who would like to get out on the water but aren't physically able to muscle their boat into position.

The wheels are easy to install on both ends of most boats. They are durable and airtight and made to withstand hard use, weather and salt water. They are capable of rolling over any and all terrain including sand, mud, rocks, and vegetation. They'll even roll over logs on the ground. They are attached to heavy machined aluminium shafts which, in turn, are installed on the boat with heavy duty brackets.

The boat launching wheels will not interfere with your fishing or with the motor and flip up when not in use. Flipped back down, they can be used as a trolling brake. Flipped all the way around, they can be used as supports to store the boat, upside down, off the ground. If you have a small boat, you'll want to check these out.
